

Everpure Offers the Full Range of Water Solutions

Bottleless Water Coolers and Drinking Fountains

Everpure's high quality drinking water filter takes out dirt, chlorine, illness-causing cysts, asbestos—even lead. It provides additional value for already economical bottleless water coolers and drinking fountains.

Cold Beverage Vending

Everpure filters for cold beverage vending machines take out chlorine, dirt and other contaminants that can drive the carbonation out of a drink and destroy the taste of the beverage. They inhibit limescale buildup, which leads to machine downtime and customer dissatisfaction. Also, they control the formation of microbial bacteria, a major cause of slime formation in vending tubing and machine components.

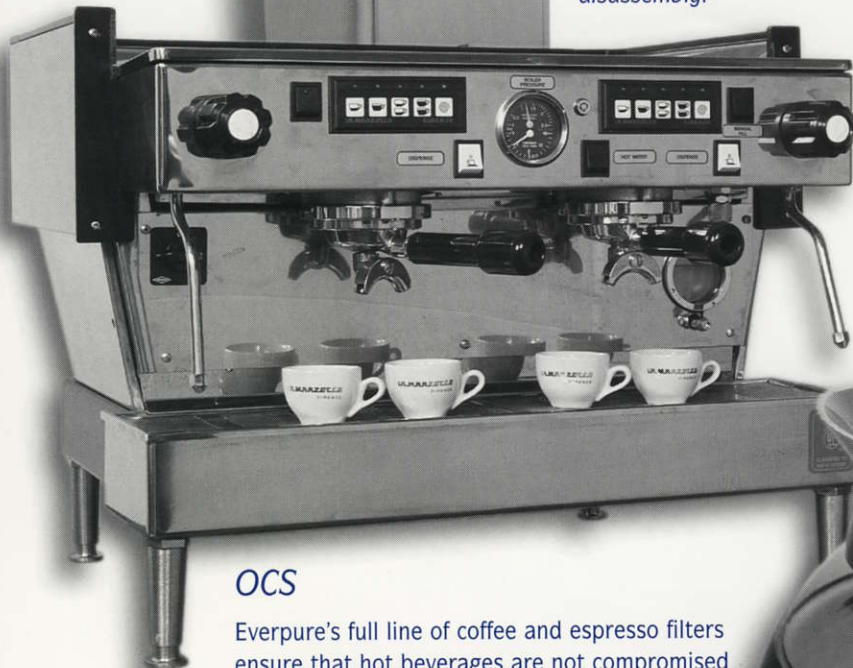

Hot Beverage Vending

Everpure filters for hot beverage vending machines take out chlorine, which makes hot beverages taste bitter, and limescale and particulate matter, which shorten the life of the machine. Also, they reduce the slime that forms in vending tubing and machine components from microbial bacteria.

Removing Costly Limescale

ScaleKleen™ by Everpure—used with Everpure flushing/sanitizing components—removes scale quickly, easily, safely and in an environment-friendly way *without equipment disassembly*.

OCS

Everpure's full line of coffee and espresso filters ensure that hot beverages are not compromised by disinfectant chlorine which makes coffee bitter, and particulate matter, which can shorten the life of brewing equipment.
